3. HANDY. As indicated above, Human And Nature DYnamics (HANDY) was originally built based on the predator-prey model. We can think of the human population as the "predator", while nature (the natural resources of the surrounding environment) can be taken as the "prey", depleted by humans.

There are many challenges in developing models of collective behavior, in particular when relating mechanism of social interaction with processes of (natural) selection. Even over the ecological scale there exists a complex recursive feedback between individual and group behavior; individual decisions influence group dynamics, which influence individual decisions, and so on.

A multibody dynamic (MBD) system is one that consists of solid bodies, or links, that are connected to each other by joints that restrict their relative motion. The study of MBD is the analysis of how mechanism systems move under the influence of forces, also known as forward dynamics. A study of the inverse problem, i.e. what forces are necessary to make the mechanical system move in a ...
