Neonatal 3: Meconium Suctioning Portal. When a newborn infant has particulate or meconium on its body, tracheal aspiration of meconium may have occurred. A distinction is no longer made for purposes of evaluation between thick and thin meconium. A determination for suctioning is now made based on whether the infant is vigorous or non-vigorous.

Neonatal 3: Meconium Suctioning Portal - CALS

Background Meconium is a viscous green-black substance that consists of denuded intestinal epithelial cells, ingested lanugo hair, mucus, digestive enzymes, bile acids, and water. The term

meconium is derived from the Greek word mekonion, which means poppy juice or opium, presumably either because of its tarry appearance or because of Aristot...
