Remote Manual Stop Station NFPA 110, 1999 edition, Chapter 3-5.5.6. I get a lot of questions about this. It has long been a requirement. You will find it in NFPA 110, 1999 edition, chapter 3-5.5.6 as well as all subsequent and previous editions.

Remote Manual Stop Station - Standby Power Solutions

The main reason for these changes is that the 2000 LSC references the 1999 edition of the Standard for Emergency and Standby Power Systems (NFPA 110) and the 1996 edition of the Standard on Stored Electrical Energy Emergency and Standby Power Systems (NFPA 111).

Emergency power code revisions | HFM

A break glass station is not defined in the 1999 edition of the NFPA 110, but, based on the information contained in the 2010 edition, is interpreted to be a switch that requires two actions to reduce the chance of accidental and unauthorized operation. B. Remote location means that it shall be located remote from the generator, so it is protected

GENERATOR REMOTE STOP SWITCH REQUIREMENTS

This may be a result of CMS adopting the 2012 NFPA with references to the 2010 edition of NFPA 101. The older version of the 2000 NFPA 101 referenced the 1999 edition of NFPA 110 previously enforced by CMS. I do not have access to that older version of NFPA 110 to verify section 7.12.6.3 existed. The decision by the committee makes sense to me.

NFPA 110 2010 5.6.3.6 and 7.12.6.2 interpretation | NFPA ...

installed, tested, and maintained in accordance with 1999 NFPA 110, Standard for Emergency and Standby Power Systems. Section 6-4.2.2 of the 1999 NFPA 110 requires diesel-powered generators that do not meet the monthly testing requirements under section 6-4.2 to be run annually with various loads for a total of two (2) continuous hours.

Center for Clinical Standards and Quality /Survey ...

NFPA 110 (1999 edition) 3-5.5.6 All Level 1 and 2 installations shall have a remote manual stop station of a type similar to a break-glass station located outside the room housing the prime mover, where so installed, or located elsewhere on the premises where the prime mover is located outside the building.

DQA CODE QUESTION AND ANSWER

Location Chapter references are from NFPA 110, 1999 edition unless otherwise noted. Level 1 EPS systems need to be in a separate room with a 2-hour fire rating or in an appropriate enclosure outside of the building.

Minnesota Department of Health

Description of NFPA 110 1999. NFPA 110 provides the latest installation criteria and maintenance practices for emergency power systems. This edition includes new requirements for indication and alarm of low coolant level, clarification of the location requirements for emergency power supplies, modified requirements for periodic EPSS operational load testing, and more!

NFPA 110, 1999 - MADCAD.com

NFPA 110 (1999 edition) requires generators to be located in a dedicated room, separated from all other areas and spaces by 2-hour fire rated barriers. NFPA 110 is very clear that nothing else may be located, stored or mounted inside the generator room, which includes normal power distribution equipment.
