Only kanban planned items can be used in defining a pull sequence. See: MPS/MRP Planning Attribute Group. Pull Sequences For every kanban planned item, you must define a pull sequence, which is a series of kanban locations that model the replenishment network on the shop floor. A kanban location can be a subinventory or an inventory locator.

### **Overview of Kanban Replenishment (Oracle Inventory Help)**

The product of kanban size and number of kanban cards (or containers) will satisfy the demand at capacity for the planning horizon. Kanban size refers to the number of items in each kanban container. Each kanban container has one kanban card, so the number of kanban cards is the same as the number of kanbans for each item.
