Meiosis is a two-part cell division process in organisms that sexually reproduce. Meiosis produces gametes with one half the number of chromosomes as the parent cell. In some respects, meiosis is very similar to the process of mitosis, yet it is also fundamentally different from mitosis. The two stages of meiosis are meiosis I and meiosis II.

Meiosis Study Guide. 1) The purpose of meiosis is to produce haploid gametes for reproduction. Haploid cells have only one copy of each chromosome (instead of two- which would be diploid). Gametes are specialized cells meant for reproduction (sperm and ova (egg) in humans).. 2) Meiosis can be divided up into distinct phases similar to mitosis but with some important differences.
