Activity diagrams are graphical representations of workflows of stepwise activities and actions with support for choice, iteration and concurrency. In the Unified Modeling Language, activity diagrams are intended to model both computational and organizational processes (i.e., workflows), as well as the data flows intersecting with the related activities.

Many major physiological processes depend on regulation of proteolytic enzyme activity and there can be dramatic consequences when equilibrium between an enzyme and its substrates is disturbed. In this prospective, the discovery of small-molecule ligands, like protease inhibitors, that can modulate catalytic activities has an enormous therapeutic effect.

I. SUMMARY: Students learn how to investigate the olfactory system and then find out how to plan and carry out their own experiments. In the "CLASS EXPERIMENT," students find that the ability to detect an odor decreases with continued exposure to that odor, a property called olfactory fatigue. They learn basic facts about sensory receptors, nerve connections, and brain areas, and discover what ...
