## Oracle Internet Directory Documentation

In a cloned Oracle Internet Directory environment, undesired host names can cause errors, failures, or performance degradation. This problem can occur when you clone an Oracle Internet Directory instance and the cloned target instance gets undesired host names from the source instance.

## Oracle Internet Directory

Oracle Internet Directory is a standards-based LDAP directory which leverages the scalability, high availability and security features of the Oracle database. Oracle Internet Directory enables you to efficiently administer the employees, customers, suppliers and partners that need access to your applications. The product provides a single, centralized repository for all user data.
