Cell Cycle, Mitosis & Meiosis Study Guide Flashcards | Quizlet

Meiosis is a two-part cell division process in organisms that sexually reproduce. Meiosis produces gametes with one half the number of chromosomes as the parent cell. In some respects, meiosis is very similar to the process of mitosis, yet it is also fundamentally different from mitosis. The two stages of meiosis are meiosis I and meiosis II.

When it comes to cellular reproduction/division on the MCAT you must be very familiar with Mitosis and Meiosis. This includes what occurs in each of the phases, the products of each pathway, and the key differences between mitosis and meiosis. This MCAT study guide cheat sheet is meant to serve as a visual guide to help you understand each pathway.

Mitosis and Meiosis MCAT Cheat Sheet Study Guide

The first phase of meiosis I. During prophase I the replicated chromosomes condense, homologous chromosomes pair up, crossing over occurs between homologous chromosomes, the spindle is formed, and the nuclear envelope breaks apart into vesicles. Prophase I is the longest phase of meiosis.

Meiosis Study Guide. 1) The purpose of meiosis is to produce haploid gametes for reproduction. Haploid cells have only one copy of each chromosome (instead of two- which would be diploid). Gametes are specialized cells meant for reproduction (sperm and ova (egg) in humans).. 2) Meiosis can be divided up into distinct phases similar to mitosis but with some important differences.

Meiosis II is the second major subdivision of meiosis. It occurs in essentially the same way as mitosis. In meiosis II, a cell contains a single set of chromosomes. Each chromosome, however, still has its duplicated sister chromatid attached. Meiosis II segregates the sister chromatids into separate cells.
