Mental Ray Fast Subsurface Scattering

A Subsurface Scattering material is ideal for re-creating skin in 3D computer graphics and is why the Mental Ray Subsurface Scattering Fast Skin shader was specifically created. Ordinary Shaders. To compare the benefits of using the SSS Fast Skin shader, a model of the human head was set-up with a three point lighting system and a Phong material.

Note: The SSS materials appear in the Browser only if mental ray is the active renderer. The subsurface scattering (SSS) materials are provided especially to model skin and other organic materials whose appearance depends on more than one layer of light scattering. 3ds Max provides four of these materials.

Subsurface Scattering (SSS) Materials - docs.autodesk.com

The subsurface scattering (SSS) materials are intended for modeling skin and other organic materials whose appearance depends on light scattering among multiple layers. 3ds Max provides four of these materials. Each is a top-level wrapper (a "phenomenon") for shaders whose controls are documented in the Standard mental ray Shader Libraries document.

New SUBSURFACE SCATTERING in MAYA 2015 tutorial - MILA SCATTER

The fast subsurface scattering material phenomena are pre-configured groups of shaders designed to produce a scattering effect. A material phenomenon "takes over" the entire definition of a material (you'll notice that all ports on the material node, except for the Material port, become grayed out when a phenomenon is connected).

Working with Fast Subsurface Scattering Shaders

Subsurface Scattering (called SSS from now on, hehe) has become a lot more common in 3D applications these days, and thanks to Mental Ray being a part of Maya now, we can use it's various different SSS shaders. However, the Mental Ray SSS shaders are actually quite new for public use, and so only those with Maya 6 or greater can use them.
