Medical Journals On Cloning

The ethical implications of human clones have been much alluded to, but have seldom been examined with any rigour. This paper examines the possible uses and abuses of human cloning and draws out the principal ethical dimensions, both of what might be done and its meaning. The paper examines some of the major public and official responses to cloning by authorities such as President Clinton, the ...

Stem Cells and Cloning: Advances and Applications

Gene cloning is making of multiple copies of a single gene, by which we can make a pure copy of individual gene. These cloning have been used in many sectors of biomedical and industrial research. Alteration of the gene sequence for the production or change of protein product or cloning of genes into new organism is the main domain process of ...

Cloning describes the processes used to create an exact genetic replica of another cell, tissue or organism. The copied material, which has the same genetic makeup as the original, is referred to as a clone. The most famous clone was a Scottish sheep named Dolly. There are three different types of cloning:

According to the National Institutes of Health, for this type of cloning, also known as reproductive cloning, scientists remove a mature somatic cell (any type of cell, except a sperm or egg cell) from the animal the scientists wish to copy. The desired DNA is then transferred into an egg of the same species that has had its own DNA removed.

Cloning may cause long term health defects, a study by French scientists has suggested. A two month old calf, cloned from genes taken from the ear of an adult cow, died after developing blood and heart problems. The cloning process seemed to have interfered with the normal genetic functioning of the ...

HISTORY OF CLONING. Cloning is the outcome of the hard works on use of genetic engineering in animal breeding, treatment of hereditary diseases in human and replicating organisms. 16 In 1901, transfer of nucleus of a salamander embryonic cell to a enucleated cell was successfully undertaken. During 1940-1950, scientists could clone embryos in mammals.

The success rate in cloning is quite low: most embryos fail to develop, and many pregnancies end in miscarriage. Current efforts at human cloning are focused on creating embryonic stem cells for research and medicine, as described above. However, many feel that this type of therapeutic cloning comes dangerously close to human reproductive cloning.
