Couplers For Waveguide RF Systems. These waveguide directional couplers are very similar to coax couplers and are a basic microwave device used in most microwave systems, test sets and applications for monitoring RF power. Waveguide directional couplers allow for monitoring of power without altering the characteristics of the transmission line.

2 Theory of Microwave and Optical Waveguides a closed waveguide, the electromagnetic energy is completely trapped within metallic walls. The only way to gain access to the energy is to tap holes in the waveguide wall. Hence, it transmits signals with very good shielding and very little interference from other signals.

Efficient fiber-to-waveguide light coupling has been a issue keyin integrated photonics for many years. The main challenge lies in the huge mode mismatch between optical fiber and an a single mode waveguide. Herein, we present a novel fiber-to-waveguide coupler, named "L-coupler", through which

The phenomenon of optical tunneling can be used not only to couple energy from a fiber or a beam to a waveguide, as described in Chapter 7, but also to couple one waveguide to another. Couplers of this type are usually called directional couplers because the energy is transferred in a coherent fashion so that the direction of propagation is maintained.

Most waveguides exhibit two-dimensional guidance, thus restricting the extension of guided light in

two dimensions and permitting propagation essentially only in one dimension. An example is the channel waveguide shown in Figure 1. The most important type of two-dimensional waveguide is the optical fiber.
