Concept 13.3 Meiosis reduces the number of chromosome sets from diploid to haploid. Many steps of meiosis resemble steps in mitosis. Both are preceded by the replication of chromosomes. However, in meiosis, there are two consecutive cell divisions, meiosis I and meiosis II, resulting in four daughter cells.

Meiosis II is the second major subdivision of meiosis. It occurs in essentially the same way as mitosis. In meiosis II, a cell contains a single set of chromosomes. Each chromosome, however, still has its duplicated sister chromatid attached. Meiosis II segregates the sister chromatids into separate cells.
