you do not run an ESB in JDeveloper. An ESB runs on an application server. using a "default run target file" is completely wrong , you are misunderstanding what is going on. When defining the inbound adapter you are asked for the filename to be polled. That is where you specify the file name That tutorial works perfectly for me.

Hi Fusionists, I am trying to get a picture on the intended use of the Oracle ESB for publish/subscribe models (as mentioned in the Developer's Guide) . How much out-of-the-box functionality can I find ? We would like to implement a corporate ESB that supports pub/sub as well as additional actions on top of routing (such as e.g. validation, enrichment).
