A triangular prism is a prism composed of two triangular bases and three rectangular sides. It is a pentahedron. It is implemented in the Wolfram Language as `PolyhedronData["TriangularPrism"]`. The triangular prism has nine distinct nets, as illustrated above. The regular right triangular prism of unit edge length has surface area and volume.

Introduction. Nets of triangular prisms are made up of rectangles and triangles. Using a net to find the surface area of a rectangular prism Finding the areas of each of the rectangles and triangles of the net of a triangular prism and adding up those areas gives the surface area or total surface area of the triangular prism. For example,...

Facetings. There are two full D 2h symmetry facetings of a triangular prism, both with 6 isosceles triangle faces, one keeping the original top and bottom triangles, and one the original squares. Two lower C 3v symmetry faceting have one base triangle, 3 lateral crossed square faces, and 3 isosceles triangle lateral faces.

3D Shapes Prisms A prism is a polyhedron for which the top and bottom faces (known as the bases) are congruent polygons, and all other faces (known as the lateral faces) are rectangles. (Technically,

when the sides are rectangles, the shape is known as a right prism, indicating that the lateral faces meet the sides of the base at right angles.
