Clustering Concept Guide. Clustering is a necessary aspect of matching, required to produce fast match results by creating intelligent 'first cuts' through data sets, in order that the matching processors do not attempt to compare every single record in a table with every single other record - a process that would not be feasible in terms of system performance.

Clustering Concept Guide - oracle.com

Oracle: Cluster with example Clustering is a method of storing tables that are intimately related and often joined together into the same area on disk. The cluster key is the column or columns by which the tables are usually joined in a query.
