Functions and operators. IBM® Netezza® SQL provides many functions and operators. Functions are operations that take a value, whereas operators are symbols. In many cases, you can use functions and operations to do the same task, so the difference is commonly with the syntax. Netezza SQL supports the following types of functions:

Functions and operators - IBM
Because these functions are part of the ANSI standard, they are supported in many software packages. The Netezza system also supports the development and use of user-defined functions and aggregates. This feature is described in the IBM Netezza User-Defined Functions Developer's Guide.

Netezza SQL analytic functions - IBM
User-Defined Table Functions (UDTF) User-Defined Aggregates (UDA) User-Defined Shared Libraries; A typical UDX development cycle will include – Writing C++ code for the UDX. Compile C++ program. Register the UDX using the Netezza SQL CREATE. Test/Debug the UDX. Deployment of the UDX on development system followed by production system. Grant necessary permissions to the user to execute the UDX.

Creating User Defined Functions in Netezza - IBM PureData ...
The Netezza system also supports the development and use of user-defined functions and aggregates. This feature is described in the IBM Netezza User-Defined Functions Developer's Guide, which is available from Netezza for users who are participating in the Netezza Developer Network.

Netezza SQL analytic functions - IBM - United States
IBM Netezza user-defined functions. These topics describe how to create functions, aggregates, and shared libraries, which increase the analysis and query capabilities of the IBM Netezza® data warehouse appliance. You can create these custom objects, add them to the Netezza system, and make them available for other users to include in their queries.

IBM Netezza user-defined functions
User Defined Functions. Netezza user defined functions are not comparable to PL/SQL functions. A user can create custom functions, aggregates, and shared libraries using the user-defined extensions feature. The custom functions are used to perform specific types of analysis for business reporting and data queries.

Netezza For Developers | Marty Weber
Netezza Package for R Developer's Guide. run data transformations with nzApply, or nzRun, or data mining algorithms. It does not store any data in local memory but rather provides metadata that can be used to determine the correct table subset (columns, or rows, or both) where the user code should run.
